

**SPECIFICATION SHEET FOR
NUTRI-PAK® 12-4-12 W/MICROS 1 & 3-YEAR
CONTROLLED RELEASE FERTILIZER PACKETS**

Commercial Fertilizer:

Nutri-Pak® 12-4-12 w/micros is recommended for new or established palm trees.

Standard Formulation: Guaranteed analysis of 12% total Nitrogen, 4% available Phosphoric Acid and 12% soluble Potash (**12-4-12**) with 4% total Magnesium, 10% Combined Sulfur, .1% Boron, .1% Copper, 2% Iron, 4% Manganese, and .5% Zinc packaged in a patented controlled release packet.

Nutri-Pak® provides nutrients to palm trees continually throughout the life of the packet. It normally lasts for 1 year when using the ½ oz. packets and 3 years when using the 2 oz. packets. Over watering can reduce the life of the packet by as much as 10-20%.

Nutri-Pak® is applied next to the roots, with no danger of burning. It feeds the roots directly with no loss of nutrients through runoff or leaching. Since the packets are installed unopened, it is not only easy to use, but it's safer for you to handle because you never come into contact with the fertilizer itself.

Caution: Nutri-Pak® packets are **not** to be opened and emptied directly into the soil. This would destroy the long-term effectiveness of the product, and nullify the controlled release design of the special packaging. In addition, it might cause root burn.

Directions:

New Palm Tree Plantings

Place 3 or more packets 6-8 inches deep in the planting hole evenly spaced around the outer edges of the roots. For small palms use 3 packets, for medium palms use 9 packets and for large palms use 18 packets.

Established Palm Tree Plantings

Bury unopened packets 6-8 inches deep – spaced evenly in circle(s) surrounding the tree at distances of 2, 4 and 6 feet from the trunk. For small palm trees use 3 packets at the first circle. For medium palm trees add 6 more packets at the 2nd circle. For large palm trees add 9 more packets at the 3rd circle.
