

**SPECIFICATION SHEET FOR  
NUTRI-PAK® 15-20-15 1 & 3-YEAR  
CONTROLLED RELEASE FERTILIZER PACKETS**

**Commercial Fertilizer:**

Nutri-Pak® 15-20-15 is recommended for new or established roses and flowering plants.

Standard Formulation: Guaranteed analysis of 15% total Nitrogen, 20% available Phosphoric Acid and 15% soluble Potash (**15-20-15**) packaged in a patented controlled release packet.

Nutri-Pak® provides nutrients to the plants only during the growing season when it is needed, and normally lasts for 1 year when using the ½ oz. packets and 3 years when using the 2 oz. packets, (may last up to 2 years or 5 years in northern zones depending on which size packet is used).

Nutri-Pak® is applied next to the roots, with no danger of burning. It feeds the roots directly with no loss of nutrients through runoff, leaching or soil fixation. Since the packets are installed unopened, it is not only easy to use, but it's safer for you to handle because you never come into contact with the fertilizer itself.

**Caution:** Nutri-Pak® packets are **not** to be opened and emptied directly into the soil. This would destroy the long-term effectiveness of the product, and nullify the controlled release design of the special packaging. In addition, it might cause root burn.

**Directions:**

**New Plantings**

Place 2 or more packets 6-8 inches deep in the planting hole evenly spaced around the outer edges of the roots. For new plantings over 2 feet in height or spread, use 1 packet per additional foot of plant height or spread.

**Established Plantings**

Bury a minimum of 2 packets per plant, or 1 packet per foot of plant height or spread, evenly spaced around the drip line of the plant, 6-8 inches deep.

**Flowering Pots & Hanging Baskets**

Use 1-2 packets for 4-10 inch, 2-3 packets for 11-14 inch and 3-4 packets or more for 15 inch and up. Bury packets unopened in the pot or basket, halfway between the plants stem and the edge of the pot or basket, and halfway down or about 3 inches below the surface of the soil.
